

RISsafety is able to provide a range of products and services when it comes to height safety and solar solutions.

RISsafety has a range of different safe access systems and can provide safe access with Aluminium or Fibreglass Walkway around the solar array.

In applications that have no edge protection and there is a risk of a fall, RIS can install Handrail System which complies with AS1657 and Lifeline and Anchor point safety systems which complies with the AS1891 Series Standards.

## SYSTEM DESIGN 1:

This installation shows walkway and handrail around the solar array. The walkway provides safe access to the individual panels while the Handrail protects from a fall edge.

A smart design of Handrail and Walkway can maximize the area on a roof for the solar installation.

## BESPOKE & CUSTOMISED SAFETY SOLUTIONS:

We know that one solution does not fit all businesses, so at RISsafety we take a customer centric approach that ensures you have a dedicated team who consults with you from design stage through to completion and ongoing service beyond delivery. We have our own internal design and manufacturing capability to deliver unique and bespoke safety systems that are designed to suit specific business needs. So, no matter what your height safety requirement is, we'll give you peace of mind that you meet the highest levels of height safety in your workplace.

# SOLAR SOLUTIONS

## RIS SOLUTION:

The following images showcase an installation that was completed in Western Australia. RISsafety worked with the client and the Solar company in providing a non penetrating solution to mount the panels on the roof as well as safe access around the solar array. The following images show the:

- initial design work.
- frames and walkway installed.
- finish installation.

## COMPLETED PROJECT:
