

Mobile Access Systems

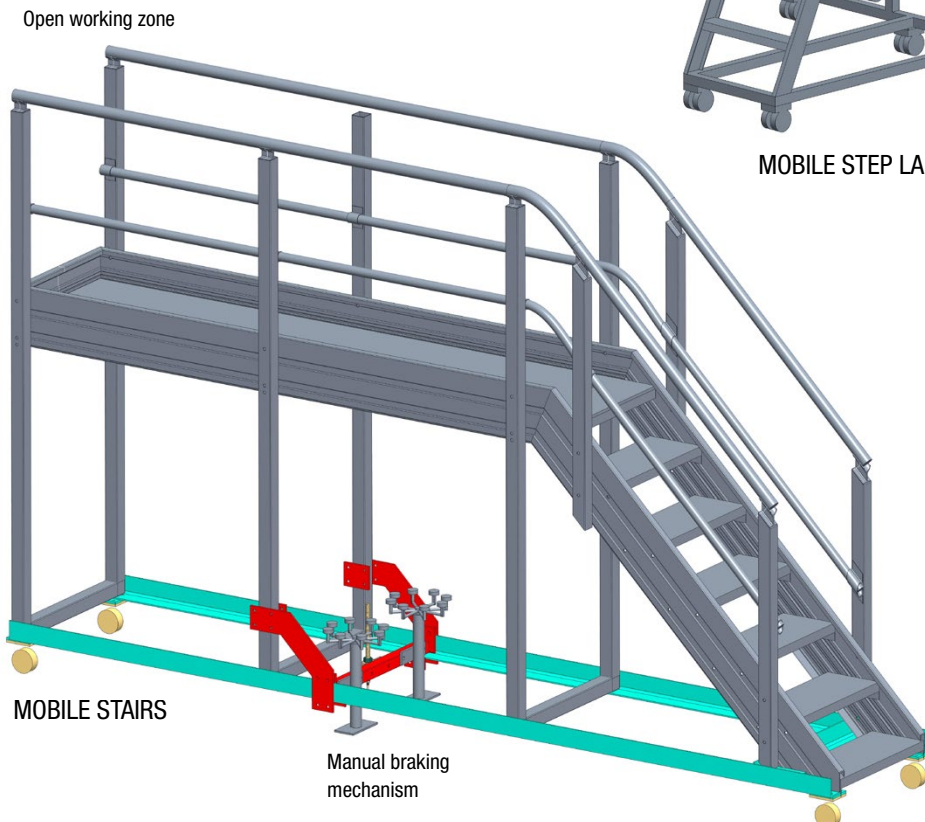

RISafety's Mobile Access Systems are designed to provide flexible height access for unique scenarios, where fixed access equipment are not suitable.

RISafety's Mobile Access Systems are self supporting with lockable wheels and/or support foot. They can be used in areas where retrofitting is not feasible.

RISafety's Mobile Access Systems can be modified to meet your and regulatory requirements, such as open or closed working zone; custom design to avoid clashing with existing structures.
